

PowerShell Hunt (index=* powershell)

Process/User:

User = NT AUTHORITY\SYSTEM

The process was running under the **SYSTEM account**.

Image:

C:\Program Files\SplunkUniversalForwarder\bin\splunk-powershell.exe

This means it was launched by the Splunk Universal Forwarder, not by a human user.

UTC Time:

2026-06-13 10:03:21.517

Event Generated:

2026-06-13T10:03:21.5194606Z

So the process started at:

13 June 2026

10:03:21 UTC

Parent Image:

C:\Program Files\SplunkUniversalForwarder\bin\splunkd.exe

Parent Command Line:

"C:\Program Files\SplunkUniversalForwarder\bin\splunkd.exe" service

Parent PID:

3040

Network Connections Hunt

(index=*sourcetype="XmlWinEventLog:Microsoft-Windows-Sysmon/Operational"
"<EventID>3</EventID>")

Title:

Network Connection Investigation

Host:

EMP-PC1

Process:

svchost.exe

User:

NT AUTHORITY\NETWORK SERVICE

Source:

224.0.0.252:5355

Destination:

192.168.50.1:56686

Protocol:

UDP

Investigation Findings:

Traffic identified as legitimate LLMNR network name resolution activity generated by svchost.exe.

External Traffic:

No

Suspicious Process:

No

Unexpected Destination:

No

Severity:

Informational

Conclusion:

Benign Windows network activity. No malicious indicators observed.

Persistence (index=* EventCode=7045)

Title:

New Service Installation Investigation

Host:

EMP-PC1

Event ID:

7045

Service Name:

KslD

Service Path:

system32\drivers\wd\KslD.sys

Service Type:

Kernel Mode Driver

Findings:

A new kernel-mode driver service was installed. Service name is uncommon but driver path indicates association with Microsoft Defender components.

Threat Assessment:

Low

MITRE ATT&CK:

T1543.003 - Create or Modify System Process: Windows Service

Recommendation:

Verify driver signature and monitor for repeated installations.

Conclusion:

Likely legitimate Defender-related driver installation. No immediate indicators of compromise.
